

Speed Information Display Sign SDU1000

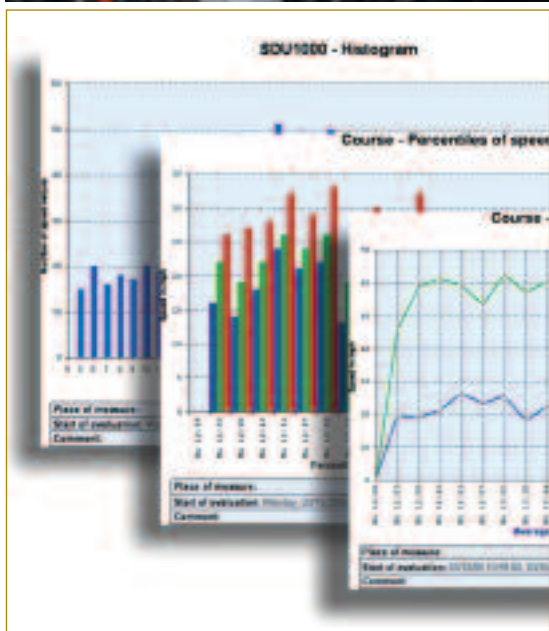

SDU1000 TRIPOD MOUNTED

SDU1000 LAMP COLUMN MOUNTED

SDU1000 EVALUATION CHARTS

PRINCIPLE OF OPERATION

The Inter-Active sign will display a real-time illustration of the approach speed of an oncoming vehicle when that vehicle is exceeding a pre-set threshold limit.

If however, the approaching vehicle is above a secondary higher threshold limit, the sign will display both SPEED and SLOW DOWN. If the vehicle then slows down and the speed falls below the secondary threshold limit, the sign will display THANK YOU with the real-time speed.

To eliminate the possibility of drivers attempting to have a high speed displayed on the sign, a third higher threshold limit can be set, this allows the safety message of SLOW DOWN to display, without the real-time speed being displayed.

- Real time speed display
- User defined adjustable speed thresholds
- SLOW DOWN & THANK YOU safety message
- Data recording facility
- Quick & Easy mounting facility for moving around sites
- Post, Lamp column or Tripod mounted
- Low voltage (option)
- Solar Powered (option)

DATA RECORDING FACILITY

The SDU1000 has the capability of recording the number of displays, percentile speeds, time & date stamps, etc. This can be downloaded onto your computer and placed into a Microsoft Excel file using the macros facility. From there the information can be displayed in any chart formation to provide a professional finish to your evaluated statistics.
